PROFESSIONAL SUMMARY

Frontend Engineer with 4+ years of experience building scalable React.js applications in SaaS and Fintech domains. Specialised in performance optimisation, component-based architecture, and complex state management with Redux. Delivered measurable impact — cutting build times by ~75%, reducing feature development effort by ~30%, and shipping production-grade interfaces across payment platforms, onboarding tools, and trading systems. Targeting frontend-heavy product teams where ownership and quality matter.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript
Frontend	React.js, Next.js, React Hooks, Single Page Applications (SPA), Component-Based Architecture, Redux Toolkit, Context API, HTML5, CSS3, Tailwind CSS, Material-UI, Bootstrap
Performance	Web Performance Optimisation, Responsive Web Design (RWD), Cross-Browser Compatibility, Lazy Loading, useMemo, useCallback, React.memo
Testing	Playwright, Jest, React Testing Library, Unit Testing, E2E Testing
APIs & Data	RESTful API Integration, State Management, Firebase
Build & DevOps	Vite, Webpack, CI/CD, Git, GitHub, Bitbucket
Tools	GitHub Copilot, VS Code, Figma (UI/UX Handoff), Agile, Scrum
Domains	Fintech, SaaS, Payment Platforms, Onboarding Tools

WORK EXPERIENCE

Sr. Frontend Developer — Coderower Software Pvt. Ltd.

Oct 2021 – Present · Remote · Hyderabad, India

- Led migration from Create React App to Vite, reducing build time from ~4 min to under 60 sec — boosting developer iteration speed by ~75% and cutting CI costs.
- Architected reusable, modular UI component libraries using React + TypeScript + Redux, reducing feature development effort by ~30% across 4 production applications.
- Optimised complex state-heavy components using useMemo, useCallback, and React.memo, eliminating unnecessary re-renders and improving responsiveness across data-intensive screens.
- Integrated RESTful APIs and implemented scalable state management with Redux Toolkit and Context API, ensuring predictable data flow across multiple production apps.
- Built fully responsive, mobile-first interfaces using Material-UI, Tailwind CSS, and Bootstrap — ensuring consistent UX across 5+ browsers and all major device types.
- Contributed to CI/CD pipeline setup, led code reviews, enforced SOLID principles, and mentored junior developers across Agile/Scrum sprints.
- Leveraged GitHub Copilot for AI-assisted development to accelerate feature delivery and prototype solutions faster.

KEY PROJECTS

Page Pilot — Product Onboarding Platform

Client: SaaS · React · TypeScript · Redux Toolkit · Component-Based Architecture · SPA

- Built dynamic tour, tooltip, and banner systems enabling non-technical teams to configure in-app onboarding — eliminating engineering dependency for onboarding changes and reducing time-to-launch per campaign.
- Implemented complex multi-step interactive UI flows using Redux Toolkit, managing branching onboarding sequences with conditional logic across user segments.

- Worked closely with UI/UX designers via Figma handoff to deliver pixel-perfect, accessible components with cross-browser compatibility.

Addpay — Digital Payment Platform

Client: Fintech · React · TypeScript · Redux · RESTful API Integration

- Built real-time transaction dashboard handling 1,000+ daily payment events — used by ops teams to monitor payment health and flag anomalies 24/7.
- Integrated third-party payment APIs ensuring secure, low-latency transaction updates with optimistic UI updates.
- Optimised rendering of data-heavy dashboard components using memoisation, maintaining smooth interactions under high data throughput.

Payswish — Bill Payments App

Client: Fintech · React · Redux · Firebase · Responsive Web Design

- Built multi-step payment flows for utility bills, mobile and DTH recharges — reducing drop-off and improving usability for recurring payment users.
- Ensured reliable UI performance for high-frequency interactions using memoisation and lazy loading.

CCMT — Crypto Mining Application

Client: London-based · React · Redux · Firebase · Web Performance Optimisation

- Developed real-time dashboards displaying live mining stats and earnings using Firebase listeners with sub-second update latency.
- Built scalable, reusable UI components to handle dynamic data updates without performance degradation.

Pulse — Health & Fitness App

Client: Health & Fitness · React.js · JavaScript · Responsive Web Design

- Implemented session booking flow with real-time trainer availability and time zone management across geographies.
- Built trainer profile and listing components with filters for expertise, availability, and user ratings; integrated calendar modules for bookings and rescheduling.

EDUCATION

B.Tech

Graduated 2022

Chaitanya Engineering College (JNTU-K), Visakhapatnam
